Description

The EUC-042S070DSC series is a 42W, constant-current IP66 LED driver that operates from 90-305 Vac input with excellent power factor and precise current control at low dimming to avoid visible mismatch. It is created for down lights and panel lights. The high efficiency of these drivers enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against over voltage, short circuit, over load, and over temperature.

Protection Functions

Parameter	Notes
Over Temperature Protection	Hiccup mode. It will be back to normal condition after over temperature is removed.
Short Circuit Protection	Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.
Over Voltage Protection	Limits output voltage at no load and in case the normal voltage limit fails.

Dimming

● 0-10V Dimming

Recommended implementations of the dimming control are provided below.

Implementation 1: DC Input

Implementation 2: External Resistor

Notes:

1. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like resistors and zener.
2. Do not connect Dim- to the output V- or V+, otherwise the driver will not work properly.
3. If 0-10V dimming is not used, Dim + can be either open or connected to Vaux.
