## Description

The *EUC-108TxxxDT(ST)* series is a 108W, three-channel, constant-current LED driver that operates from 90-305 Vac input with excellent power factor. It is created for many lighting applications including flood, tunnel and street, etc. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

## Protection Functions

Parameter	Min.	Typ.	Max.	Notes
Over Temperature Protection	-	120 °C	-	When OTP occurs, the output current decreases down to the half of the normal output current. The output shall be auto recovery when the temperature becomes normal.
Short Circuit Protection	Single channel short does not affect the normal work of other channels. The driver recovers after short is removed and AC input recycled. Dual or triple channel short latches the driver and it recovers after the short is removed.

## Dimming Control (On the secondary side)

Parameter	Min.	Typ.	Max.	Notes
12V output voltage	10.8 V	12 V	13.2 V	
12V output source current	0 mA	-	20 mA	
Absolute maximum voltage on the 1~10V input pin	0 V	-	12 V	
Source current on 1~10V input pin	0 uA	-	200 uA	

The dimmer control is operated from an input signal of 1 – 10 Vdc. Recommended implementations are provided below.

Implementation 1: DC input

Implementation 2: External Resistor

## Notes:

1.  $I_o$  is actual output current and  $I_r$  is rated current without dimming control.
2. For the driver to operate properly, the load voltage must be maintained above the minimum voltage threshold (approx. 55% of the max. output voltage for any given model).
3. If the output voltage is maintained above 55% of the maximum output voltage, the dimming control may be operated over the entire 1-10V range with output current varying from 10% to 100% of  $I_r$ .
4. The dimming signal is allowed to be less than 1V, however, when it for 0-1V, the output current is 10%  $I_o$ .
5. Do not connect the GND of dimming to the output; otherwise, the LED driver cannot work normally.
6. If 0-10V dimming is not used, Dim + can be either open or connected to Vaux.
