

Features

- Ultra High Efficiency (Up to 94%)
- Constant Current Output
- 0-10V Dimmable
- Dim-to-Off with Standby Power ≤ 1.5 W
- Input surge protection: DM 4kV, CM 6kV
- All-Around Protection: OVP, SCP, OTP
- IP67
- SELV Output
- Suitable for EU Independent Use

Description

The EUC-320SxxxDV(SV) series is a 320W, constant-current LED driver that operates from 90-305 Vac input with excellent power factor. Created for high bay, high mast, arena and roadway lights, it provides a dim-to-off mode with low standby power. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

- Notes:** (1) Certified input voltage range: 100-240Vac /127-250Vdc
 (2) Measured at 100% load and 220 Vac input.
 (3) All the models are certificated to BIS, except EUC-320S105DV and EUC-320S280DV
 (4) EUC-320S490/620DV/SV are certificated to KC, KCC
 (5) SELV Output

Note: (1) For compliance with EU Directive 2009/125/EC (ecodesign requirements for energy-related products) the Dim-to-Off function shall not be used or alternatively be interrupted through use of a relay or similar device to prevent excessive standby power consumption (as illustrated in Implementation 4).

(2) This LED driver meets the EMI specifications above, but EMI performance of a luminaire that contains it depends also on the other devices connected to the driver and on the fixture itself.

(3) To perform electric strength (hi-pot) testing, the "GDT ground disconnect" (nut and metal lock sheet) on the driver end-cap should be removed temporarily to prevent the internal gas discharge tube from conducting (as allowed by IEC 60598-1 Clause 10.2). After testing is completed, these items must be reinstalled to restore line-to-earth surge protection and secure the end cap.

Protection Functions

Parameter	Notes
Over Temperature Protection	Decreases output current, returning to normal after over temperature is removed.
Short Circuit Protection	Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.
Over Voltage Protection	Limits output voltage at no load and in case the normal voltage limit fails.

Dimming

● 0-10V Dimming

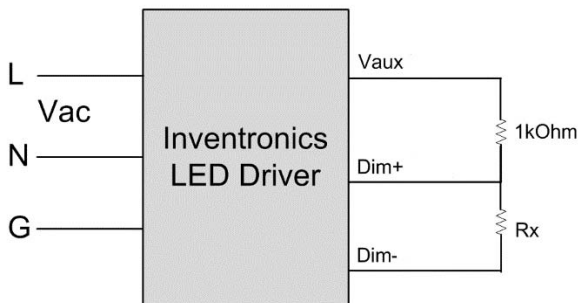

Recommended implementations of the dimming control are provided below.

Implementation 1: DC Input

Implementation 2: External Resistor

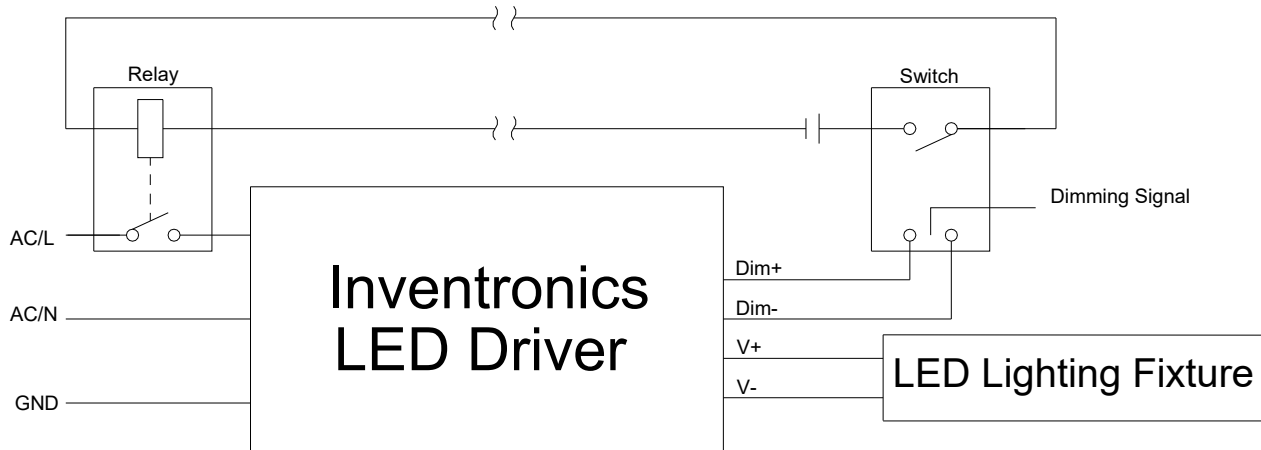

Implementation 3: External Resistor

Notes:

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
3. If 0-10V dimming is not used, Dim + can be either open or connected to Vaux.

● **0% Light Brightness**

If the brightness of the LED lighting fixture down to 0%, please refer to the following wiring method. The lamp can be turned on/off using a switch and relay.

Implementation 4: 0% Light Brightness Wiring Method
