

## Features

- Ultra High Efficiency (Up to 93.5%)
- Full Power at Wide Output Current Range (Constant Power)
- 0-5V/0-10V/PWM/Timer Dimmable
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: OVP, SCP, OTP
- IP67
- SELV Output
- 7 Years Warranty

## Description

The EUG-150SxxxDV series is a 150W, constant-current, programmable LED driver that operates from 90-305 Vac input with excellent power factor. It is created for many lighting applications including high bay, tunnel and roadway, etc. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

## Models

| Adjustable Output Current Range | Full-Power Current Range (1) | Default Output Current | Input Voltage Range(2)    | Output Voltage Range | Max. Output Power | Typical Efficiency (3) | Power Factor |        | Model Number (4)             |

- Notes:** (1) Output current range with constant power at 150W.  
 (2) Certified Voltage range: 100-240Vac or 100-250Vdc (except CCC, PSE, KS and BIS).  
 (3) Measured at 100% load and 220Vac input (see below "General Specifications" for details).  
 (4) All the models are certificated to KS and PSE, except EUG-150S070DV.  
 (5) EUG-150S070DV and EUG-150S105DV are certificated to KC.  
 (6) SELV output.  
 (7) For BIS models add suffix -3000.

## I-V Operation Area

## Input Specifications

| Parameter                        | Min.   | Typ. | Max.                  | Notes   |
|----------------------------------|--------|------|-----------------------|---|
| Input Voltage                    | 90 Vac | -    | 305 Vac               | 100-250Vdc  |
| Input Frequency                  | 47 Hz  | -    | 63 Hz                 |   |
| Leakage Current                  | -      | -    | 0.70 mA               | IEC60598-1; 240Vac/ 60 Hz   |
| Input AC Current                 | -      | -    | 1.87 A                | Measured at 100% load and 100 Vac input.  |
|                                  | -      | -    | 0.81 A                | Measured at 100% load and 220 Vac input.  |
| Inrush Current(I <sup>2</sup> t) | -      | -    | 1.98 A <sup>2</sup> s | At 220Vac input, 25 °C cold start, duration=712 μs, 10%Ipk-10%Ipk. See Inrush Current Waveform for the details. |

| EN 61547                               | Electromagnetic Immunity Requirements Applies To Lighting Equipment                          |

- Note:** (1) This LED driver meets the EMI specifications above, but EMI performance of a luminaire that contains it depends also on the other devices connected to the driver and on the fixture itself.
- (2) To perform electric strength (hi-pot) testing, the “GDT ground disconnect” (nut and metal lock sheet) on the driver end-cap should be removed temporarily to prevent the internal gas discharge tube from conducting (as allowed by IEC 60598-1 Clause 10.2). After testing is completed, these items must be reinstalled to restore line-to-earth surge protection and secure the end cap.

## Lifetime vs. Case Temperature

## Inrush Current Waveform

## Efficiency vs. Load

## Power Factor

## Total Harmonic Distortion

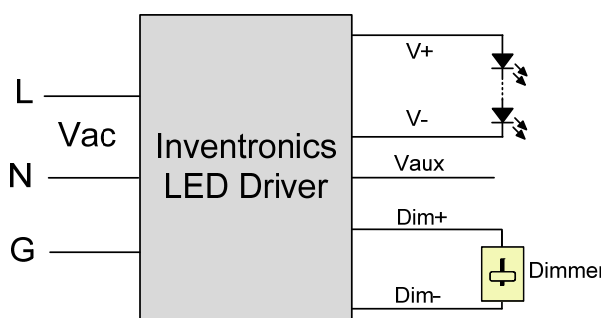

## Protection Functions

| Parameter                   | Notes  |
|-----------------------------|--|
| Over Temperature Protection | Decreases output current, returning to normal after over temperature is removed.   |
| Short Circuit Protection    | Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed. |
| Over Voltage Protection     | Limits output voltage at no load and in case the normal voltage limit fails.   |

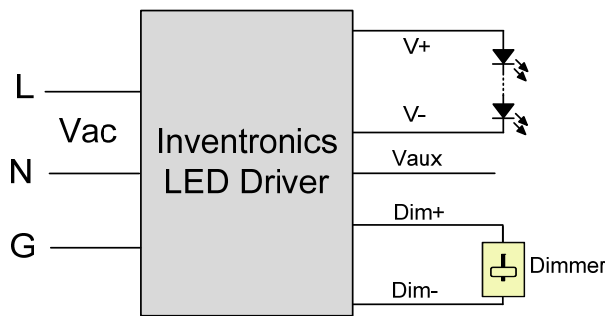

## Dimming

### ● 0-5V Dimming

The recommended implementation of the dimming control is provided below.

Implementation 1: Positive logic

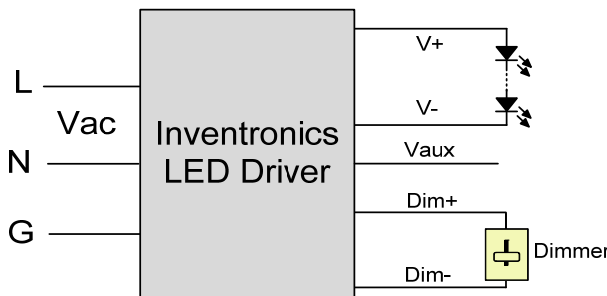

### Implementation 2: Negative logic

**Notes:**

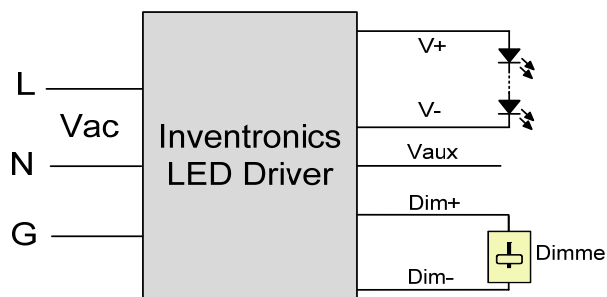

1. The dimmer can also be replaced by an active 0-5V voltage source signal or passive components like resistors and zener.
2. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
3. If 0-5V dimming is not used, Dim + should be open.
4. When 0-5V negative logic dimming mode and Dim+ is open, the driver will output maximum current.

### ● 0-10V Dimming

The recommended implementation of the dimming control is provided below.

### Implementation 3: Positive logic

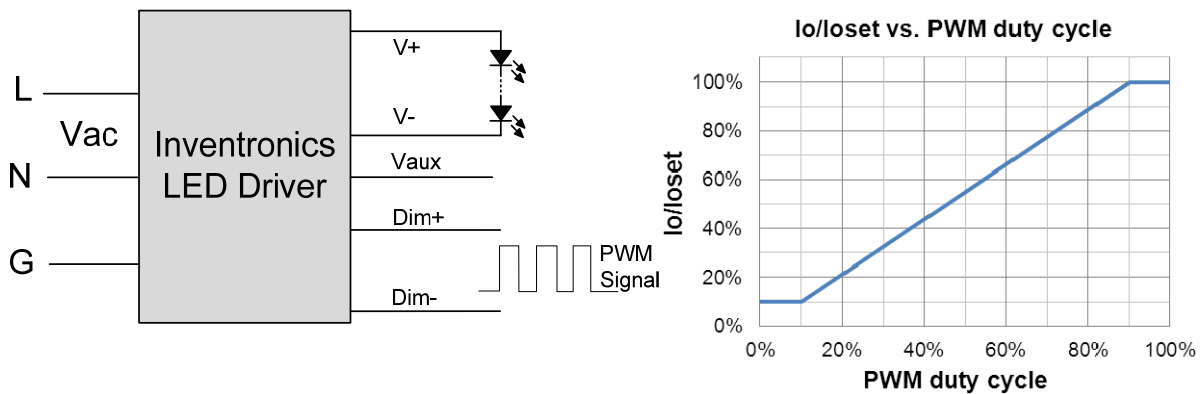

### Implementation 4: Negative logic

**Notes:**

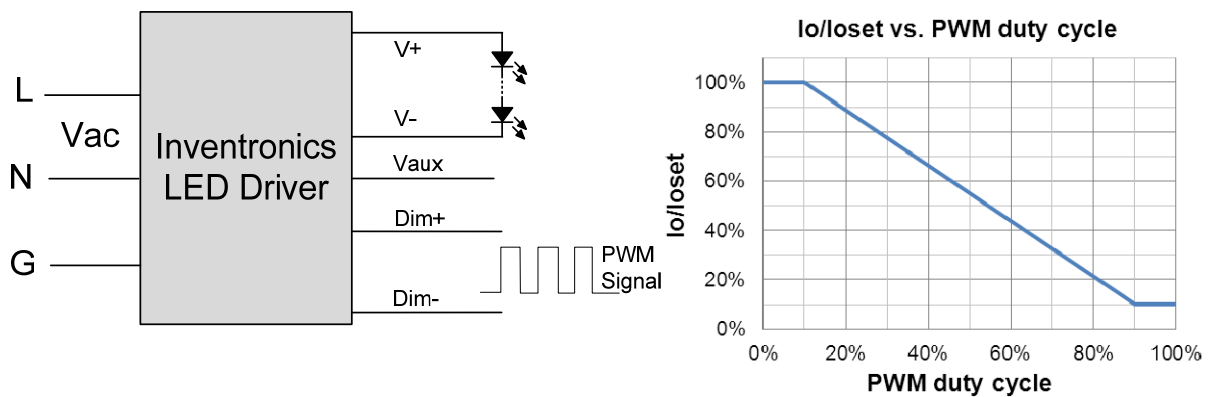

1. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like resistors and zener.
2. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
3. If 0-10V dimming is not used, Dim + should be open.
4. When 0-10V negative logic dimming mode and Dim+ is open, the driver will output minimum current.

● **PWM Dimming**

The recommended implementation of the dimming control is provided below.

**Implementation 5: Positive logic**

**Implementation 6: Negative logic**

**Notes:**

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. If PWM dimming is not used, Dim + should be open.
3. When PWM negative logic dimming mode and Dim+ is open, the driver will output minimum current.

● Time Dimming

The screenshot displays the 'IraditionalTime' configuration window. On the left, five light levels are defined with sliders for Dimming, Holding Time, and Fading Time. On the right, the 'Driver Output Operating Region' graph shows a blue curve of Voltage (V) vs Current (A) and a red curve of Dimming (%) vs Time (H).

| Light Level       | Dimming | Holding Time | Fading Time |
|-------------------|---------|--------------|-------------|
| Light level 1     | 100%    | 7H0M         | 0H45M       |
| Light level 2     | 50%     | 3H15M        | 0H40M       |
| Light level 3     | 90%     | 0H0M         | 0H0M        |
| Light level 4     | 90%     | 0H0M         | 0H0M        |
| Light level 5     | 90%     | 0H0M         | 0H0M        |
| Final light level | 90%     | -            | -           |

Set the timing curve by pulling the sliders.

## Programming Connection Diagram

EUG-150SxxxDV

EUG-150SxxxDV-3000

**Note:** The driver does not need to be powered on during the programming process.

- Please refer to [PRG-MUL2](#) (Programmer) datasheet for details.

## Mechanical Outline

### EUG-150SxxxDV

### EUG-150SxxxDV-3000

## RoHS Compliance

Our products comply with reference to RoHS Directive (EU) 2015/863 amending 2011/65/EU, calling for the elimination of lead and other hazardous substances from electronic products.
