

## Features

- Ultra High Efficiency (Up to 94%)
- Full Power at Wide Output Current Range (Constant Power)
- 0-5V/0-10V/PWM/Timer Dimmable
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: OVP, SCP, OTP
- IP67
- SELV Output
- 7 Years Warranty

## Description

The EUG-200SxxxDV series is a 200W, constant-current, programmable LED driver that operates from 90-305 Vac input with excellent power factor. It is created for high bay, high mast, arena and roadway lights. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

- Notes:** (1) Output current range with constant power at 200W.  
 (2) Certified voltage range: 100-240Vac or 127-250Vdc (except CCC, KS and BIS).  
 (3) Measured at 100% load and 220Vac input (see below "General Specifications" for details).  
 (4) All the models are certificated to KS, except EUG-200S105DV.  
 (5) All the models are certificated to SAA, except EUG-200S350DV.  
 (6) SELV Output.

**Note:** (1) This LED driver meets the EMI specifications above, but EMI performance of a luminaire that contains it depends also on the other devices connected to the driver and on the fixture itself.

(2) To perform electric strength (hi-pot) testing, the "GDT ground disconnect" (nut and metal lock sheet) on the driver end-cap should be removed temporarily to prevent the internal gas discharge tube from conducting (as allowed by IEC 60598-1 Clause 10.2). After testing is completed, these items must be reinstalled to restore line-to-earth surge protection and secure the end cap.

## Protection Functions

Parameter	Notes
Over Temperature Protection	Decreases output current, returning to normal after over temperature is removed.
Short Circuit Protection	Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.
Over Voltage Protection	Limits output voltage at no load and in case the normal voltage limit fails.

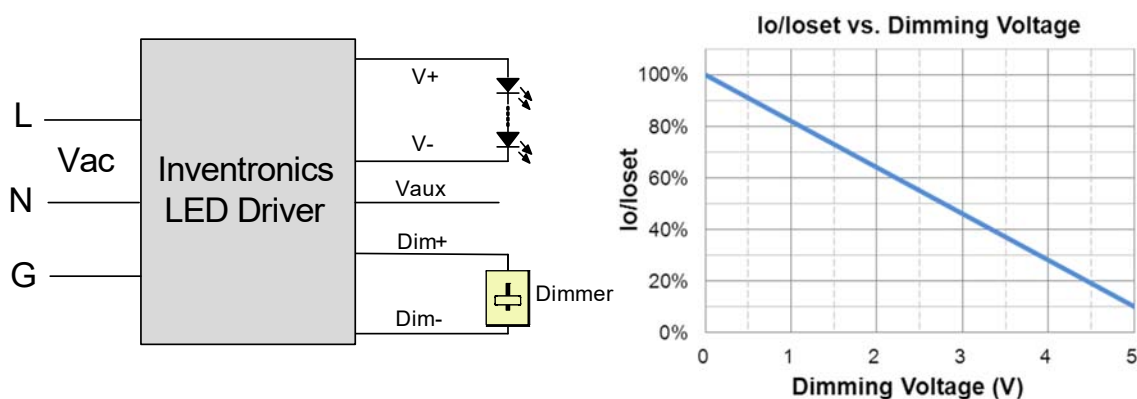

## Dimming

### ● 0-5V Dimming

The recommended implementation of the dimming control is provided below.

**Implementation 1: Positive logic**

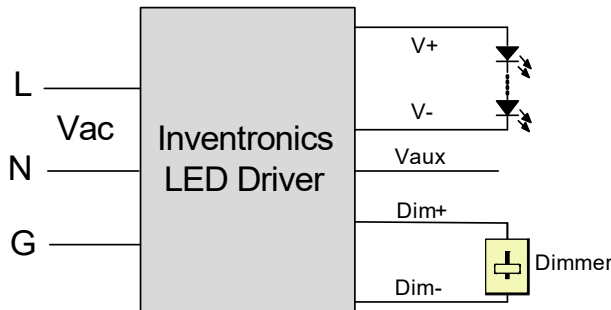

**Implementation 2: Negative logic**

### Notes:

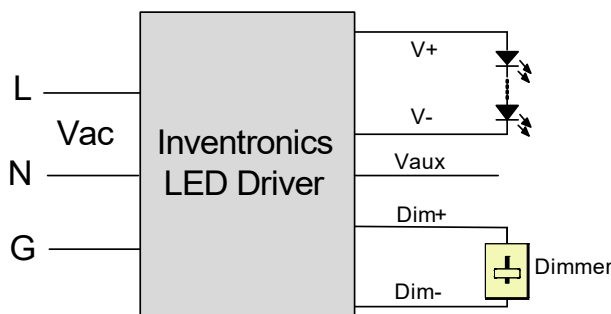

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 0-5V voltage source signal or passive components like zener.
3. When 0-5V negative logic dimming mode and Dim+ is open, the driver will output maximum current.

## ● 0-10V Dimming

The recommended implementation of the dimming control is provided below.

**Implementation 3: Positive logic**

**Implementation 4: Negative logic**

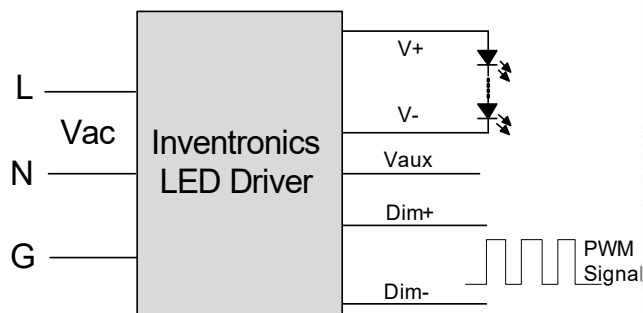

### Notes:

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
3. When 0-10V negative logic dimming mode and Dim+ is open, the driver will output minimum current.

## ● PWM Dimming

**Implementation 5: Positive logic**

### Implementation 6: Negative logic

**Notes:**

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. When PWM negative logic dimming mode and Dim+ is open, the driver will output minimum current.

● **Time Dimming**

Set the timing curve by pulling the sliders.

## Programming Connection Diagram

**Note:** The driver does not need to be powered on during the programming process.

- Please refer to [PRG-MUL2 \(Programmer\)](#) datasheet for details.

## Mechanical Outline

**Note:** Waterproof connectors certified to CCC & CE are also available for these drivers; please contact Inventronics Sales.

## RoHS Compliance

Our products comply with reference to RoHS Directive (EU) 2015/863 amending 2011/65/EU, calling for the elimination of lead and other hazardous substances from electronic products.
