

Features

- Non-Isolated Class I driver
- Low Residual Output Voltage < 2kV
- No Afterglow
- Dim-to-Off with Standby Power $\leq 0.5W$ @ 230Vac
- Dimming Range: 0.4%-100%
- 3*600W Independent Programmable Channels & Support Common Anode Output Connection
- Max Remote Distance Up to 300 Meters
- Ultra High Efficiency (Up to 97%)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) via DALI/DMX-RDM
- DALI-2 and D4i Certified & DMX-RDM & 3-Timer-Modes Dimmable
- Single-channel (1*DT6 or 1*DMX) Operating Mode
- DALI-2/DMX-RDM Controls Up to 33 fps
- Integrated Power Metering with High Accuracy up to $\pm 1\%$
- Thermal Sensing and Protection for LED Module
- Low Inrush Current
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 10kV, CM 10kV
- All-Around Protection: IOVP, IUVP, OVP, SCP, OTP
- IP66
- IK08 Enclosure
- 5 Years Warranty

Description

The NES-1K8TxxxBC series is a non-isolated 1800W, 3 channels, constant-current, programmable and IP66 LED driver that operates from 198-457 Vac input with excellent power factor. Created for many lighting applications including sports, high mast, UV-LED, aquaculture and horticulture, etc. The dimming control supports two-way communication via DALI-2 and complies with D4i, furthermore it incorporates DMX-RDM dimming. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, input under voltage, input over voltage, output over voltage, short circuit, and over temperature.

Note: (1) This LED driver meets the EMI specifications above, but EMI performance of a luminaire that contains it depends also on the other devices connected to the driver and on the fixture itself.

(2) To perform electric strength (hi-pot) testing, the wire plugged in CM terminal should be removed temporarily to prevent the internal gas discharge tube from conducting (as allowed by IEC 60598-1 Clause10.2). After testing is completed, this wire must be reconnected to restore line-to-earth surge protection.

Protection Functions

Parameter		Min.	Typ.	Max.	Notes
Over Temperature Protection		Decreases output current smoothly, returning to normal after over temperature is removed.			
Short Circuit Protection		Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.			
Over Voltage Protection		Limits output voltage at no load and in case the normal voltage limit fails.			
Input Under Voltage Protection (IUVP)	Input Protection Voltage	170 Vac	180 Vac	190 Vac	Turn off the output when the input voltage falls below protection voltage.
	Input Recovery Voltage	180 Vac	190 Vac	200 Vac	Auto Recovery. The driver will restart when the input voltage exceeds recovery voltage.

● External Thermal Protection

This needs an external circuit which locates on the hottest part of LEDs to protect the whole lumianires when the temperature exceeds the ratings. The circuit will be connected by V+ LED and OTP terminal on driver. The default protection temperature point is 90°C, it can be changed by Inventronics programmer along with the actual target.

● Strobe function

NES-1K8 driver supports strobe function up to 33 fps from 100% dimming to 0% change forth and back. In order to protect relays reliability, the relays will still keep 3s 'ON' status when receiving the dim-to-off command and then enter "OFF" status without receiving dimming ON command. but it will immediately operates back to "ON" status if receiving the dimming on command, so the relays will not operate 'ON' and 'OFF' frequently in fast strobe operation within 3s duration time in default mode. When the duration time of strobe operation is between 3s and 15 minutes, the commands below need to be added for ensuring the relay lifetime.

(1) DALI-2 Dimming Mode

Type	Commands	Hex Data	Send Twice	Notes
Special	DTR1 = 2 (0x02)	C3 02	-	Set the relay to 'always-ON' when dim-to-off, the status reverts to default upon restart.

Dimming (DALI Dimming Mode)

● DALI-2 Dimming

The recommended implementation of the dimming control is provided below.

Implementation: DALI-2 Dimming

Dimming (DMX-RDM Dimming Mode)

● DMX-RDM Dimming

The recommended implementation of the dimming control is provided below.

Implementation: DMX-RDM Dimming

- Note:**
- (1) Up to 32 drivers may be daisy-chained, terminated by a 120 ohms resistor (connected between DMX+ & DMX- at the last driver)
 - (2) 300m maximum length
 - (3) 100m maximum between drivers
 - (4) For best performance, a characteristic impedance of 120 ohms should be maintained for the entire length of the control line.

● Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- **Self Adapting-Midnight:** Automatically adjusts the dimming curve based on the on-time of past two days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local time.
- **Self Adapting-Percentage:** Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- **Traditional Timer:** Follows the programmed timing curve after power on with no changes.

● Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

● End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.

When hi-pot testing, you need to remove the yellow/green colored 'CM wire' as shown in the drawings; and then reconnect after the test.
<p>A typical configuration when using DMX-RDM</p>		

There is a 5 core plug that is connected to DA+,DA-,24V,DA+,DA- terminals, and there are two receptacles on the driver's PCB marked 'DALI' and 'DMX', Please adjust the plug location to corresponding dimming mode. The default dimming mode is DALI.

Programming Connection Diagram

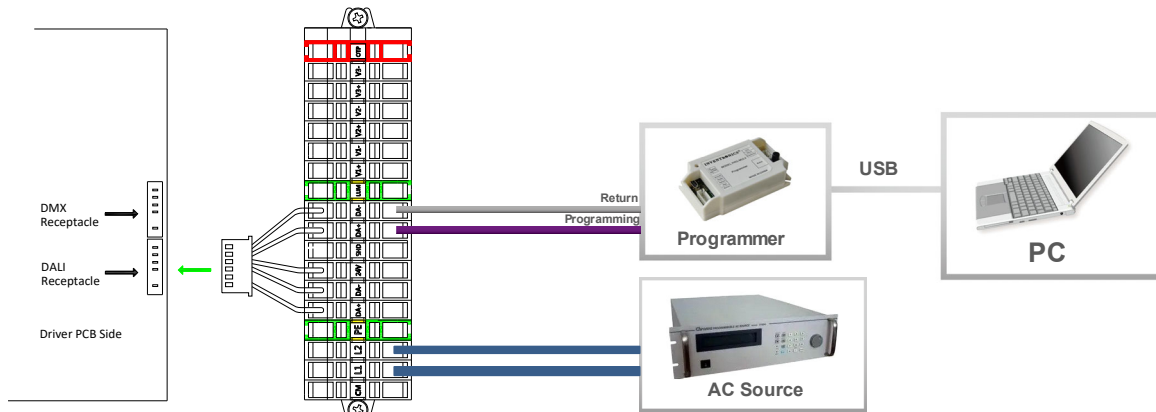

Note: The driver needs to be powered on during the programming process.

- Please refer to [PRG-MUL2](#) (Programmer) datasheet for details.

How to Program to Switch between DALI (default) and DMX-RDM

● Switch DALI to DMX-RDM

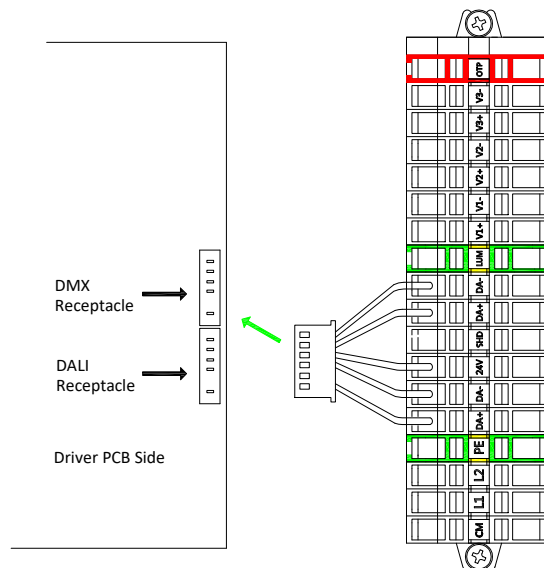

Step 1: Ensure the plug is connected to DALI Receptacle

Step 2: Select “DMX” dimming mode and click ‘Write’ in INV PC Programming Interface

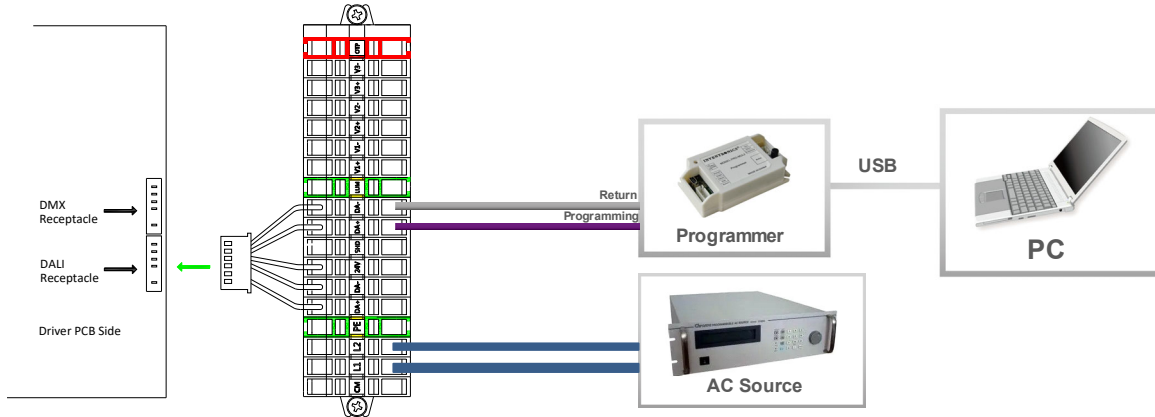

Step 3: Change the plug position to DMX Receptacle

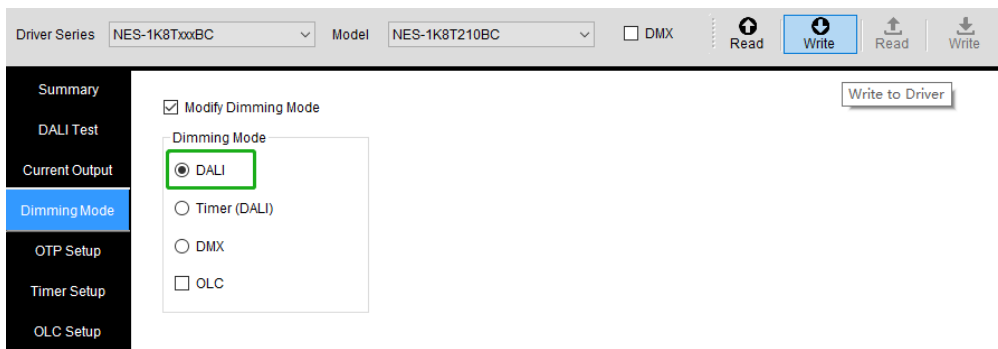

● **Switch DMX-RDM to DALI**

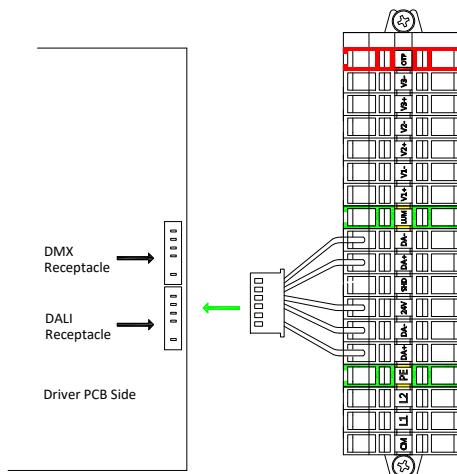

Step 1: Ensure the plug is connected to DALI Receptacle

Step 2: Select “DALI” dimming mode and click ‘Write’ in INV PC Programming Interface

Step 3: Ensure the plug remains to DALI Receptacle
