150W Programmable Driver with INV Digital Dimming

#### **Features**

- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with Programmability
- Isolated 0-10V/PWM/3-Timer-Modes Dimmable
- INV Digital Dimming, UART Based Communication Protocol
- Dim-to-Off with Standby Power ≤ 1.5W
- Always-on Auxiliary Power:
   12Vdc, 250mA, 3W (Transient Peak Power up to 10W)
- Low Inrush Current
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: IUVP, IOVP, OVP, SCP, OTP
- IP66/IP67 and UL Dry/Damp/Wet Location
- TYPE HL, for Use in a Class I, Division 2 Hazardous (Classified) Location
- 5 Years Warranty

### **Description**

The *ESM-150SxxxMx* series is a 150W, constant-current, programmable and IP66/IP67 rated LED driver that operates from 249-528Vac input with excellent power factor. Created for smart lighting application, this family provides an auxiliary voltage and dim-to-off functionality for powering low voltage, wireless controls. The dimming control supports 0-10V dimming as well as two-way communication via Digital Dimming, a UART based communication protocol. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, input under voltage, input over voltage, output over voltage, short circuit, and over temperature.

Notes: (1) Output current range with constant power at 150W

- (2) Certified input voltage range: 277-480Vac.
- (3) Measured at 100% load and 480Vac input (see below "General Specifications" for details).
- (4) SELV output.
- (5) x = G are UL Recognized, ENEC and CCC, etc. models; x = T are UL Class P models.

## 0-10V Dimming

The recommended implementation of the dimming control is provided below.

Implementation 1: Positive logic

Implementation 2: Negative logic

#### Notes:

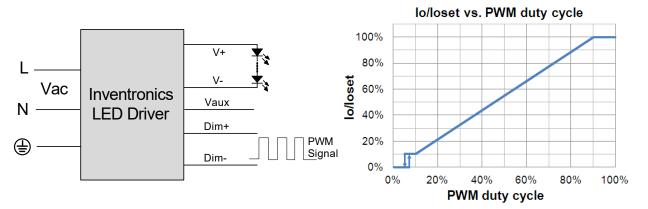

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
- 3. When 0-10V negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

Rev.C

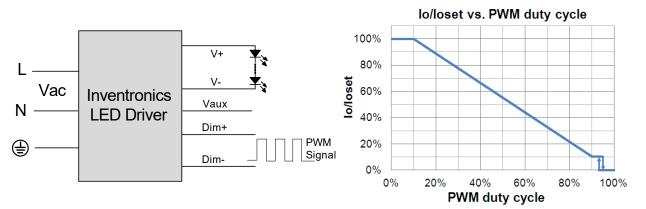

# ESM-150SxxxMx

# PWM Dimming

The recommended implementation of the dimming control is provided below.

### Implementation 3: Positive logic

Implementation 4: Negative logic

#### Note:

- 1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
- 2. When PWM negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

#### Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two
  days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local
  time.</li>
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

#### Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

### End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.

### Digital Dimming

Inventronics Digital Dimming is a UART (Universal Asynchronous Receive Transmitter) based communication protocol. Please refer to <u>Inventronics Digital Dimming</u> file for details.

### **Programming Connection Diagram**

**Note:** The driver does not need to be powered on during the programming process.

### Please refer to <u>PRG-MUL2</u> (Programmer) datasheet for details.
