600W Non-Isolated Single Channel Programmable IP66 Driver

Features

- Non-Isolated Class I Driver
- No Afterglow
- Dim-to-Off with Standby Power ≤ 0.5W @ 230Vac
- Dimming Range: 0.1%-100%
- Max Remote Distance Up to 300 Meters (Dimming and Output)
- Ultra High Efficiency (Up to 97%)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with NFC
- DALI-2 and D4i Certified & DMX-RDM & 3-Timer-Modes Dimmable
- DALI-2/DMX-RDM Controls up to 44 fps
- Integrated Power Metering with High Accuracy up to ±1%
- Thermal Sensing and Protection for LED Module
- Low Inrush Current
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 10kV, CM 10kV
- All-Around Protection: IOVP, IUVP, OVP, SCP, OTP, OPP
- IP66
- IK08 Enclosure
- 5 Years Warranty

Description

The NFS-600SxxxBC series is a 600W, single channel, constant-current, programmable and IP66 LED driver that operates from 180-528 Vac input with excellent power factor. Created for many lighting applications including sports, high mast, UV-LED, aquaculture, and horticulture, etc. The dimming control supports two-way communication via DALI-2 and complies with D4i, furthermore it incorporates DMX-RDM dimming. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, input under voltage, input over voltage, output over voltage, short circuit, and over temperature.

Models

Output	Full-Power Current	Default Output	Output Voltage	Max. Output	Typical	Typ Power	ical Factor	Model Number ⁽³⁾
Current Range (mA)	Range (mA) ⁽¹⁾	Current (mA)	Range (Vdc)	Power (W)	Efficiency ⁽²⁾	220Vac	480Vac	
1.2-2100	1200-2100	1200	176-500	600	97.0%	0.99	0.95	NFS-600S210BC

Notes: (1) Output current range with constant power at 600W

- (2) Measured at 100% load and 480Vac input (see below "General Specifications" for details).
- (3) Certified voltage range: 200-480Vac

Note: (1) This LED driver complies with IEC/EN 61347-2-13, Annex J (EL mark) requirements for AC emergency lighting LED drivers. It is suitable for emergency luminaries (IEC 60598-2-22), but not intended for use in high-risk emergency lighting locations as defined by the ISO 30061.

Fax: 86-571-86601139

6/16

Specifications are subject to changes without notice.

⁽²⁾ This LED driver meets the EMI specifications above, but EMI performance of a luminaire that contains it depends also on the other devices connected to the driver and on the fixture itself.

Input Over Voltage Protection Diagram

External Thermal Protection

This needs an external circuit which locates on the hottest part of LEDs to protect the whole luminaires when the temperature exceeds the ratings. The circuit will be connected by V+ LED and OTP terminal on driver. The default protection temperature point is 90°C,it can be changed by Inventronics programmer along with the actual target.

Reference	Description	Recommendation

Strobe Function

This driver supports strobe function up to 44 fps from 100% dimming to 0% change forth and back. In order to protect relays reliability, the relays will still keep 3s 'ON' status when receiving the dim-to-off command and then enter "OFF' status' without receiving dimming ON command, but it will immediately operates back to "ON" status if receiving the dimming on command, so the relays will not operate 'ON' and 'OFF' frequently in fast strobe operation within 3s duration time in default mode. The default 3s can be adjusted by programming interface or commands.

Dimming (DALI Dimming Mode)

DALI-2 Dimming

The recommended implementation of the dimming control is provided below.

Implementation: DALI-2 Dimming

Dimming (DMX-RDM Dimming Mode)

DMX-RDM Dimming

The recommended implementation of the dimming control is provided below.

Implementation: DMX-RDM Dimming

Notes:

- 1. The compatible on control system list please refer to: DMX-RDM Dimming Compatible Controller System List.
- 2. Up to 32 drivers may be daisy-chained, terminated by a 120 ohms resistor (connected between DMX+ & DMX- at the last driver)
- 3. 300m maximum length between driver and master
- 4. 100m maximum between drivers
- 5. For best performance, a characteristic impedance of 120 ohms should be maintained for the entire length of the control line.

600W Non-Isolated Single Channel Programmable IP66 Driver

Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local time.
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.
