#### **Features**

- Non-Isolated Class I Driver
- No Afterglow
- Dim-to-Off with Standby Power ≤ 0.5W @ 230Vac
- Ultra High Efficiency (Up to 97%)
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with NFC
- DALI-2 and D4i Certified & DMX-RDM & 0-10V & PWM & Resistor & 3-Timer-Modes Dimmable
- Adjustable Dimming Curve
- INV Digital Dimming, UART Based Communication Protocol
- Hold Time Adjustable
- Fade Time Adjustable
- Always-on Auxiliary Power: 12Vdc, 250mA (Except DMX-RDM Mode)
- Minimum Dimming Level Supports 0.1% for DALI-2 and DMX-RDM
- Minimum Dimming Level Supports 1% for 0-10V, PWM, Resistor, Time Dimming and Digital Dimming
- Controls up to 44 fps
- Integrated Power Metering with High Accuracy up to ±1%
- Low Inrush Current
- Output Lumen Compensation
- End-of-Life Indicator
- Input Surge Protection: DM 10kV, CM 10kV
- All-Around Protection: OPP, IOVP, IUVP, OVP, SCP, OTP
- IP66/IP67 and UL Dry/Damp/Wet Location
- TYPE HL, for Use in a Class I, Division 2 Hazardous (Classified) Location
- 5 Years Warranty

#### **Description**

The NFM-880SxxxGx series is an 880W, constant-current, programmable and IP66/IP67 rated LED driver that operates from 180-528Vac input with excellent power factor. Created for many lighting applications including high mast, sports, UV-LED and horticulture, etc. It provides an auxiliary voltage and dim-to-off functionality for powering low voltage, wireless controls. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, overpower protection, input under voltage, input over voltage, output over voltage, short circuit, and over temperature.

#### **Models**

Adjustable Output	Full-Power Current	Default Output	Output Voltage	Max. Output	Typical	7 F	ical Factor	Model Number <sup>(3) (4)</sup>
Current Range (mA)	Range (mA) <sup>(1)</sup>	Current (mA)	Range (Vdc)	Power (W)	Efficiency <sup>(2)</sup>	220Vac	480Vac	Woder Number
1.76-3500	1760-3500	3500	150-500	880	97.0%	0.99	0.95	NFM-880S350Gx

Notes: (1) Output current range with constant power at 880W.

- (2) Measured at 100% load and 480Vac input (see below "General Specifications" for details).
- (3) Certified voltage range: 200-480Vac
- (4) x = G are UL Recognized, ENEC and CE, etc. models; x = T are UL Class P models.

### Input Over Voltage Protection Diagram

Rev.B

#### Strobe function

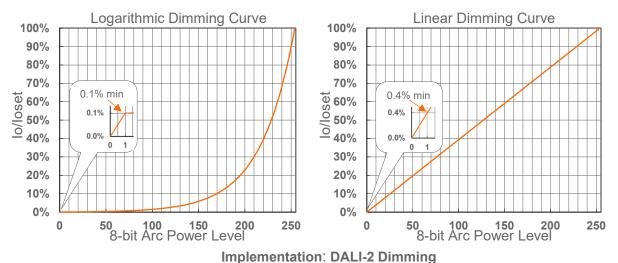

This driver supports strobe function up to 44 fps from 100% dimming to 0% change forth and back. In order to protect relays reliability, the relays will still keep 3s 'ON' status when receiving the dim-to-off command and then enter "OFF' status' without receiving dimming ON command, but it will immediately operates back to "ON" status if receiving the dimming on command, so the relays will not operate 'ON' and 'OFF' frequently in fast strobe operation within 3s duration time in default mode. The default 3s can be adjusted by programming interface or commands.

## **Dimming**

#### DALI-2 Dimming

The recommended implementation of the dimming control is provided below.

#### **Dimming (DMX-RDM Dimming Mode)**

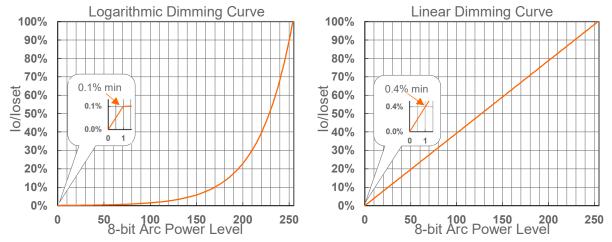

#### DMX-RDM Dimming

The recommended implementation of the dimming control is provided below.

11/18

Rev.B

880W Non-Isolated Programmable Driver

Implementation: DMX-RDM Dimming

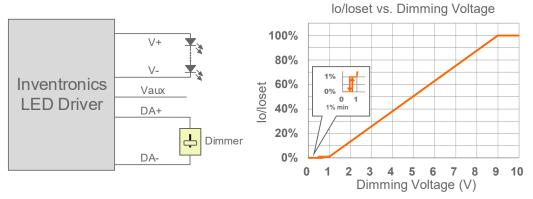

#### Notes:

- 1. The compatible on control system list please refer to: DMX-RDM Dimming Compatible Controller System List.
- 2. Up to 32 drivers may be daisy-chained, terminated by a 120-ohm resistor (connected between DMX+ & DMX- at the last driver)
- 3. 300m maximum length between driver and master
- 4. 100m maximum between drivers
- 5. For best performance, a characteristic impedance of 120 ohms should be maintained for the entire length of the control line.

#### **Dimming (0-10V&PWM&Resistor Dimming Mode)**

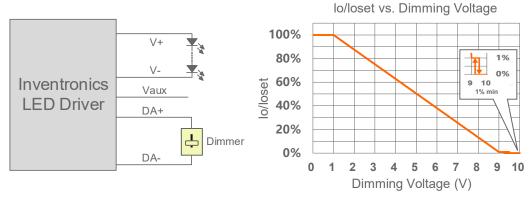

#### 0-10V Dimming

The recommended implementation of the dimming control is provided below.

Implementation 1: Positive logic

Rev.B

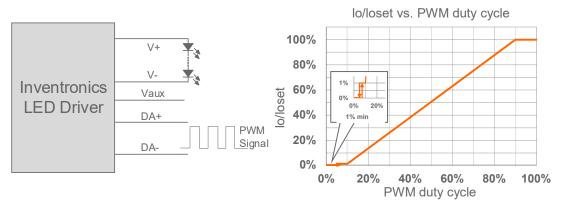

Implementation 2: Negative logic

#### Notes:

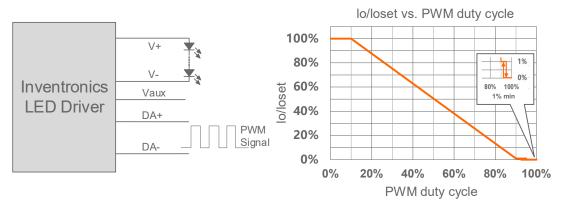

- 1. Do NOT connect DA- to the output V- or V+, otherwise the driver will not work properly.
- 2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
- 3. When 0-10V negative logic dimming mode and DA+ is open, the driver will dim to off and be standby.

#### PWM Dimming

The recommended implementation of the dimming control is provided below.

Implementation 3: Positive logic

Implementation 4: Negative logic

#### Notes:

- 1. Do NOT connect DA- to the output V- or V+, otherwise the driver will not work properly.
- 2. When PWM negative logic dimming mode and DA+ is open, the driver will dim to off and be standby.

13/18

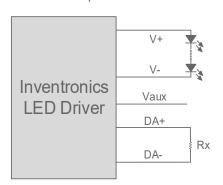

All specifications are typical at 25  $^{\circ}$ C unless otherwise stated.

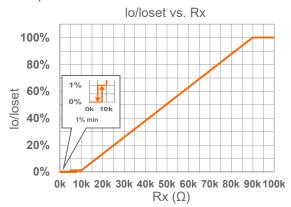

Specifications are subject to changes without notice.

Rev.B

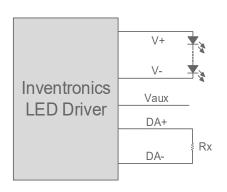

#### Resistor Dimming

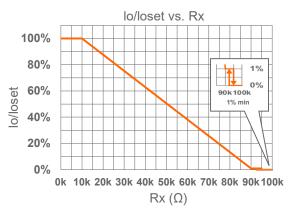

The recommended implementation of the dimming control is provided below.

Implementation 5: Positive logic

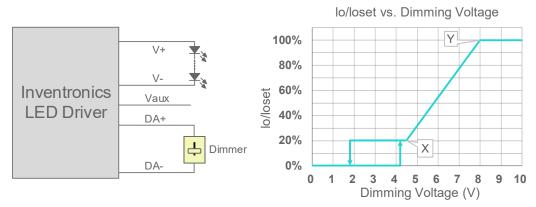

Implementation 6: Negative logic

#### Notes:

- 1. Do NOT connect DA- to the output V- or V+, otherwise the driver will not work properly.
- 2. When resistor negative logic dimming mode and DA+ is open, the driver will dim to off and be standby.

#### Adjustable Dimming Curve

0-10V dimming curve can be set as corresponding dimming voltage by Inventronics Multi Programmer. Take the positive logic dimming mode as an example, the recommended implementation of the dimming control is provided below.

Implementation 7: Positive logic

Specifications are subject to changes without notice.

All specifications are typical at 25 ℃ unless otherwise stated.

NFM-880SxxxGx

Rev.B

880W Non-Isolated Programmable Driver

#### Notes:

- 1. Do NOT connect DA- to the output V- or V+, otherwise the driver will not work properly.
- 2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.
- 3. When dimming voltage X point is set to be smaller than Y point, the dimming curve is positive logic; conversely, when X point is set to be bigger than Y point, the dimming curve is negative logic.
- 4. For best dimming accuracy, the difference between X point and Y point is advised more than 4V.
- 5. Dimming off voltage Adjustable.

#### Time Dimming

Time dimming control includes 3 kinds of modes, they are Self Adapting-Midnight, Self Adapting-Percentage and Traditional Timer.

- Self Adapting-Midnight: Automatically adjusts the dimming curve based on the on-time of past two
  days (if difference <15 minutes), assuming that the center point of the dimming curve is midnight local
  time.</li>
- **Self Adapting-Percentage**: Automatically adjusts the on-time of each step by a constant percentage = (actual on-time for the past 2 days if difference <15 min) / (programmed on-time from the dimming curve).
- Traditional Timer: Follows the programmed timing curve after power on with no changes.

#### Output Lumen Compensation

Output Lumen Compensation (OLC) may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation.

#### Hold Time Adjustable

When AC power is first applied to the LED driver, enabling a "Hold" period can allow devices powered by the Auxiliary voltage to stabilize before the driver fades up to the maximum dimming level. During this period, the driver will not respond to external dimming commands but will respond again after the hold time ends. Both the initial dimming percentage and the duration of this hold period can be adjusted by the Inventronics Multi Programmer. This function is disabled by default

#### Fade Time Adjustable

There is a "Fade" period after the "Hold" period. The soft-start time and dimming slope applied to all dimming transitions can be adjusted individually. It is adjusted by the Inventronics Multi Programmer. This function is disabled by default.

#### End Of Life

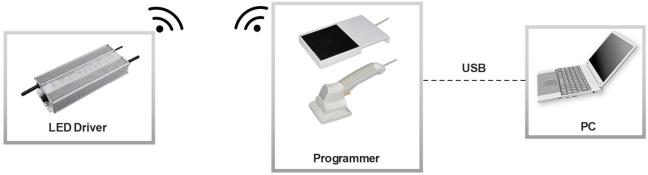

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output during the first 1 minute before normal operation is continued.

#### Digital Dimming

Inventronics Digital Dimming is a UART (Universal Asynchronous Receive Transmitter) based communication protocol. Please refer to <a href="Inventronics Digital Dimming">Inventronics Digital Dimming</a> file for details.
